Advancing Transportation Demand Management

The Association for Commuter Transportation is the premier Transportation Demand Management (TDM) advocacy organization in the United States; supporting the education and development of over 1,000 professionals at private companies, state and local government, non-profits, and service providers.

ACT strives to get the most out of our transportation system while improving the lives of commuters, increasing the livability of communities, and supporting the economic growth of businesses creating...

ACT Members Include:
- Fortune 500 companies
- Universities & Hospitals
- State/Local/Regional Governments
- Regional Transit Authorities
- Mobility on Demand Providers
- Metropolitan Planning Organizations
- Transportation Management Associations

...a better journey for everyone!

Effective TDM Measures
- Qualified Transportation Fringe Benefit
- Public Transit & Ridesharing
- Marketing & Education
- Telecommuting
- Effective Regulations & Land Use Planning
- Parking Management
- Bicycle & Pedestrian Infrastructure

Commuting by the Numbers
- 130 million commuters
- 76% drive alone to work
- 41 hours of delay/year
- $305 billion cost of congestion
- 28% of GHG emissions from transport

ACT’s Policy Cornerstones

Necessity and demand require that we shift the way we address our transportation and infrastructure needs. We must develop a more efficient and effective transportation system that gets more out of what we already have; and moves people with the goal of reducing congestion, improving air quality and stimulating economic activity.

Focus on People
ACT believes that federal transportation policy should focus on creating a multimodal transportation system that moves people. This does not mean we abandon efforts to maintain and grow our transportation network. On the contrary – we need a more comprehensive strategy at federal, state, and local levels to address both infrastructure and transportation.

Invest in New Technologies, Practices, and Business Models
ACT supports policies that encourage investments in new technologies and removes hurdles preventing new practices and business models. Federal, state & local policies have helped to create an inefficient & unconnected transportation network. Innovation in the form of new technologies and business models, can get the most out of our system.

Integrate & Leverage All Entities Delivering Transportation Solutions
Across the nation, employers, Transportation Management Associations (TMAs), and public and private sector mobility providers are taking an active role improving the nation’s transportation system. ACT supports policies that include all stakeholders in the planning and delivery of transportation solutions.

Place Value on Delivering the Best Solutions
The American public demands answers to transportation quandaries. Our finite transportation system, coupled with limited resources, requires a shift in the way decisions are made and which projects and programs are funded. ACT supports policies that compel decision makers to find the best solutions rather than simply validate a completed project.
